

PROFESSIONAL SUMMARY

Pipeline developer and technical director with approximately 10 years in animation and VFX. Develops Python and Maya integrations for asset management, publishing, data extraction, and production automation. Works across departments to translate artist requirements into practical tools and resolve complex pipeline failures across Linux and Windows. Experience includes USD workflows, Flow Production Tracking (Shotgrid), distributed render/compute environments, deadline management (AWS Deadline Cloud and local repository) and GIT CI/CD. Currently looking to expand towards professional ML projects.

TECHNICAL SKILLS

PROFESSIONAL EXPERIENCE

PIXOMONDO

2022 - PRESENT

LEAD SUPPORT DEVELOPER

- Lead technical investigation and resolution of complex software, pipeline, infrastructure, and production issues.
- Develop Python tools and automation to solve production problems and improve user workflows.
- Debug issues spanning application code, APIs, package environments, operating systems, storage and render infrastructure.
- Perform code reviews, provide technical guidance, and coordinate technical work across the support team.
- Partner with software developers, infrastructure engineers, systems teams, and production users to implement long term solutions.

SENIOR PIPELINE DEVELOPER

- Developed and maintained Python-based production tools used across multiple departments
- Designed and implemented components of the studio's USD production architecture, including departmental and shot level layers.
- Developed the initial FX production pipeline, shader workflows, and associated automation.
- Developed and maintained integrations with Rez-based package, dependency, and environment management systems.
- Used Git/GitLab for source control, collaboration, code review, CI/CD workflows, and software delivery.

SNOWBALL STUDIOS

2019- 2022

CG SUPERVISOR

- Set guidelines for artists to work with in a 3D production.
- Negotiated and managed clients to set achievable goals.
- Worked with department heads to approve deliverables.

PIPELINE DEVELOPER

- Worked in an Agile/Scrum development team to design, implement, and maintain production software.
- Developed Python tools and applications supporting multiple 3D production departments.
- Designed the architecture for a task-validation system used to validate assets before downstream processing.
- Designed and implemented production pipelines for Crowds, FX, and Edit/Ingest workflows.
- Automated asset import, validation, processing, and publishing workflows.
- Gathered requirements from users and translated production needs into software solutions.

KEYFRAME DIGITAL

2016 - 2018

PIPELINE DEVELOPER / RIGGING TD

- Developed tools and automation for production workflows, primarily using Python and 3ds Max.
- Designed and implemented an asset-management pipeline supporting production from asset creation through downstream shot departments.
- Built internal tools to automate repetitive artist, rigging, and asset-processing workflows.
- Supported production users and resolved technical issues involving tools, assets, and workflows.

EDUCATION

2013 - 2016

HUMBER COLLEGE - DIPLOMA - 3D ANIMATION, ART AND DESIGN

RECENT PROJECTS

MAYA ASSET REPRESENTATION SYSTEM

- Developed custom Maya asset and proxy-reference tools to manage GPU, proxy, and render representations.
- Implemented representation switching and file translators for Alembic GPU caches, USD stand-ins, and Maya USD proxy shapes.

USD PUBLISHING & VALIDATION

- Worked on asset and animation publishing with USD layers, LOD variants, and Alembic exports, supporting data exchange between modeling, rigging, surfacing, and downstream departments.
- Developed and maintained Pyblish validation and extraction tools for scene structure, shading, naming, and publish metadata; investigated export failures and incompatible scene data.

PRODUCTION DATA & FARM AUTOMATION

- Developed ShotGrid TimeLog export tooling with per-user selection, date filtering, cached downloads, and employee reports; addressed failed-user handling and export validation.
- Updated worker configuration and PDG submission tools to align resource groups, platform constraints, and job settings with production requirements.
